Terminal Disclaimer

1. The terminal disclaimer filed on March 13, 2006 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent No. 6,288,730 has been reviewed and is accepted. The terminal disclaimer has been recorded.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Craig Hemingway on March 9, 2006.

The Attorney agreed to cancel claims 1, 5-15, 17-27.

Allowable Subject Matter

3. Claims 2-4, and 16 are allowed.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, an address ordering device, among other things, comprising:

a memory control block receiving dispatched addresses and *sequentially performing read operations* on the memory system using the dispatched addresses;

Art Unit: 2676

a first level reorder queue storing a plurality of *current addresses*, each of the current addresses being equal to one of the dispatched addresses;

a conflict queue storing stalled addresses, *each of the stalled addresses being an address into texture memory* that has its corresponding read operation postponed due to an address conflict;

an in-order tag queue storing first tag information, each piece of first tag information corresponding to an address in the first level reorder queue;

an out-of-order tag queue storing second tag information, *each piece of second tag information corresponding to an address in the conflict queue*;

a conflict detection and control logic unit;

and a reassembly logic unit reassembling data read from the memory system into the specific order, the reassembling being done according to the first tag information and the second tag information.

The closest prior art, Brayton et al. (U.S. Patent No. 5,623,628) teaches a memory subsystem comprising a memory control block controlling dispatching memory access to the memory subsystem. The memory control block includes a conflict queue to store stalled address due to address or resource conflict, a in-order queue storing ordered tag information, an out-of-order queue to deter transactions, and reassembling data in a specific order.

However, reference Brayton et al. does not teach the above emphasized features.
